

Pilot 1: November 2022
EVALUATION DOCUMENT

Project Aims

Proof of concept

We set out to explore what The Great Imagining was as an immersive exhibition and what the ingredients of that experience might be.

Our intention was to understand how contributors, partners and audiences of all ages, cultural and social backgrounds will experience The Great Imagining from and to learn for the next iteration.

We had a series of areas, focuses and filters through which to deliver the project.

OUTCOMES: The project exceeded our expectations in regards to the number and diversity of people and regions who participated as well as the variety and quality of the experiences. As well as the level of engagement within many of our topic areas.

FUTURE LEARNING: Training sessions for all participants and volunteers to enable maximum audience engagement. Clear interpretation information displayed in the actual space about what the exhibition as well as each individual piece of content is aiming to communicate. More programmed sessions from artists and content producers working with the audience to activate the artwork.

* AIMS: Produce a four day event and exhibition

OUTCOMES: The event was open from 6—9pm on Friday 22nd November; 10am—9pm on Saturday 23rd and Sunday 24th; 10am—7pm on Monday 25th and Tuesday 26th

There were over 85 contributing artists and designers in the exhibition. In addition there were 7 contributing schools with around 100 students.

Workshops and talks

AIMS: To host a series of activities every day to animate and promote the exhibition and the ideas around the exhibition.

OUTCOMES: We had a minimum of 6 workshops happening each day that ranged from making Corn Dollys, Cyanotypes, preparing food using regeneratively farmed ingredients, beer can votives, drawing, modelling, meditating and yoga. We had talks on food sustainability, fermentation,

the future of death and the funeral industry, poetry readings, music and product design. Oliver Wallace ran an emmersive storytelling session for future dreaming.

The Botanical Illustration workshop did not have a workshop leader so did not happen.

FUTURE LEARNING More time to plan and produce the workshops.

Multisensory

AIMS Working with all the senses stimulates imagination. Smell, sound, visuals, tastes, textures, doing and making.

OUTCOMES: Re-Peat young peatlands collective brought a Peatland perfume from Norwegian and Chilean artists.

Zivi Sainsbury put together four soundtracks which were a soundscape to the event with sounds from nature, birdsong, folk and traditional music, whale song as well as other ambient music.

All weekend we had delicious food from our food and agriculture partners, Moro, Jolene Bakery and Wildfarmed. We also had vegan food from Gaia Pulses and Zest Kitchen.

Regenerative production

AIMS Minimal impact materials and low impact logistics. Minimal carbon footprint analysed and transparent.

OUTCOMES: Some of the content travelled from Cornwall, Birmingham and Margate. We intend to decentralise to ensure that the work is accessible to people without travelling.

Most of the art direction was made to be reusable - the corkboards, the calico banners and the wooden signage.

Because of the short time scale we bought some supplies from unchecked supply chains such as purchases from Amazon.

FUTURE LEARNING source all purchases from ethical supply chains and run a professional carbon analysis on the exhibitions to look at its carbon footprint per head of the visitors.

Work with institutions who have the capacity and equipment to produce events of this nature and support smaller organisations and schools through toolkits and equipment supplies as well as inkind loans or rentals.

Crowdfunding

AIMS: We set out to raise a budget of £30,000 for the exhibition in four weeks. We ran a crowdfunding campaign to start to market the ideas to a wider audience, build brand awareness and identify some funding partners who could support us. This budget was to cover the management of the exhibition, all production costs, creative commissioning fees and evaluation.

OUTCOMES: We successfully raised the money and have produced the exhibition within budget.

We filmed and edited our own video and set a campaign on Crowdfunder to raise £30,000 which we achieved.

FUTURE LEARNING: more time to raise money, set budgets and plan.

In-kind corporate sponsorship

AIMS: To engage companies and businesses in supporting the work and offering expertise.

OUTCOMES: We had inkind sponsorship from Sam Clark at Moro, Jeremie Cometto Lingenheim and David Gingell at Jolene and Edd Lees from Wildfarmed.

Our cinema was sponsored by Waterbear who gave us a selection of films to show as part of our programme.

Insight Lighting Ltd donated our sound and light system.

FUTURE LEARNING: to build on this exciting part of the process with more lead time, dedicated sponsorship decks, corporate sponsorship team and work with partners PR and marketing teams.

Start the process of inclusive engagement

AIMS: To involve a wide range of people and organisations in the first pilot. Our criteria was people and organisations who were:

* Regional as well as London based

OUTCOMES: We had contributions and participants from Cornwall, Birmingham, Bristol, Margate, Norfolk and Manchester.

* International as well as UK based

OUTCOMES: We had contributions from the Brazilian Amazon rainforest, Uganda and The Netherlands.

* Academics, experts, people with lived experience and people who are new to futures thinking

OUTCOMES: The people involved in making the exhibition as well as visiting ranged from international creatives, academics and experts to local people from Newham.

Inclusive culture

AIMS: To be fully inclusive to people of all ages and all cultural backgrounds at all stages in the process from content generation to audience and for them to feel valued when they get involved.

OUTCOMES: We had a huge variety of participants in the exhibition, talks programme and workshops all of whom invited friends and family to the 4 days of the programme so we had every culture, socio economic background and age-group.

On Saturday from 5pm till 9pm there was a teenage takeover by TGI Radicles and Candlelit Matinee on Sunday from 6pm till 9pm was a takeover by under 24 year olds.

SneakAheads are a new campaign to mobilise activism in young people through sneaker design. The team who included academics aladin aladin, Daria Badiei and Better Shoes Foundation shoe designer (notably Star Wars) Sven Segal, ran a series of workshops and talks.

Through our relationship with Westminster College we had a team of young people working with us on the social media, communications and production.

We also worked with teenagers and students from Newham through our work experience programme.

As part of our exhibition we worked with departments in Royal School of Needlework, Paloma Gormley's students from Practice Architecture and Material Cultures at Central St Martins and young people not in eduction or training from Inspire Training, Swansea.

Some of the participating students came with friends and family. Cullinan & Buck architects showed a couple of architectural models and young architect Raphael Haque lead a talk.

Upcycled clothes designer Anna Kompaniets displayed a costume made mostly from crocheted nylon tights.

Designer Nina Tolstrup from Studio Mama and Vic Buurman loaned us upcycled furnature and textile artifacts.

FUTURE LEARNING: Build in a strategy from the beginning to ensure that there is a wide range of participation and audience representation. This will ensure that everyone can feel represented and have the best chance of contributing quality work to future activities.

Cross-curricular content

AIMS: To cover a wide range of content inspired by our foundation concepts, our Thinklopedia topic areas and value pillars so that the exhibition is fully inclusive and demonstrates the systems we are living within and the interconnectedness of topics.

outcomes: The content explored and engaged with every concept and topic area as well as value pillar. These could have been more obviously connected in the minds of the audience. There were some topics that arose in the process of curation that are obviously a hugely important area to explore with a wealth of learning for example Debbie Malynn who is a Death Doula and gave a presentation about the culture of death and sustainable futures.

FUTURE LEARNING: Curating through topic areas ensures the most sophisticated, clear and stimulating exhibition.

Create Issue One of The Great Imagining newspaper

AIMS: To produce a newspaper that was distributed to the visitors to the show. This would include articles about each topic area to support the work that was produced for the exhibition.

OUTCOMES: We invited dozens of contributors to submit articles about their organisation or their specialist topic area. We decided to postpone the publication of this as a printed newspaper till after the event.

Instead the pages that were finished were displayed around the exhibition in different topic areas. As a consequence of this delay we have been able to include all the work from the exhibition which we would not have included if it had been distributed at the time.

We are planning to print and distribute 10,000 copies of this to schools, universities, organisations, families and corporations through a crowdfunding campaign. We are also uploading content to our purpose built gallery website.

FUTURE LEARNING: The online and printed newspaper will be a key marketing device and content generator for inspiring and documenting ideas as well as a product for fundraising.

Visual identity

AIMS: Generate exciting visuals around TGI for brand awareness purposes as well as creating playful and engaging visual content for inspiration purposes going forward.

OUTCOMES: We commissioned maker Vivienne Havell to create 28 topic banners which hung from the walls of the exhibition. The logo was created on wooden panels and hung high up on the end wall.

We designed ideas cards, name stickers and topic headers on the noticeboards to give some cohesion to the experience.

Climate, Water and Earth were represented throughout the exhibition through three parallel ribbon lines

The newpaper was also designed with a playful environmental feel in a contemporary visual language (QR codes, etc.) FUTURE LEARNING: Build on our strength as a visual arts lead organisation to offer resources to partners and engage the wider audiences. More diversity of visuals within a strong visual identity. Budget for professional documentation and training for a social media team.

Build partnerships

AIMS: to start building partnerships with colleges, schools, creative organisations and institutions.

OUTCOMES: We built the foundations for long term partnerships with Universities: RSN, London College of Fashion & CSM product design courses at UAL.

As well as Waterbear, food outlets, Handsworth Association of Schools, Step into The Amazon and many others.

FUTURE LEARNING: Build strategy for inviting all partners to experience exhibitions, and write articles for newspaper.

Fundraising

AIMS: to start conversations with future funders.

OUTCOMES: We built a relationship with Zivi and Mark Sainsbury and with the support of Sian Ferguson from the Sainsbury Family Trusts we have secured 2 years of core funding from Mark Leonard Trust.

John Fairbairn from Esmee Fairbairn foundation also gave us a small grant towards the exhibition. There were several larger donations on our crowdfunding campaign and we were supported by 106 donors.

FUTURE LEARNING: Build strategy for inviting funders to experience exhibitions, and send copies of newspaper to them.

Start working on Corporate Sponsorship.

Talks and perfomances

Over the course of the weekend we had a programme of live talks and performances

* Edd Lees: wildfarmed and regenerative farming

Edd lees who is one of the three partners in Wildfarmed came on Tuesday evening and spoke about the process of regenerative farming and how his company is developing farming in this area.

* Asa Simonsson: fermentation presentation

This workshop focused on gut health and fermentation. Asa who is an experienced Nutritionist demonstrated how to pickle vegetables and how this can reduce food waste whilst improving immunity.

* Fari Bradley: Iranian women talk and folksong

artist and activist Fari Bradley opened the Great Imagining exhibition with a speech, song and banner dedicated to those fighting for womens freedom in Iran. This was a rallying cry for transformation for this this land with its extraordinary heritage. She spoke passionately of the experience of the Iranian people in the UK as well as Iran itself and the luxury of imagination.

№ Debbie Malynn: Love, Loss, Life

Debbie is a death doula and spoke about the importance of culture in death and mortality and how this can reframe ideas about life itself as well as our attitudes to the environmental effects of burial and cremation and other alternatives.

BY DEUSE - 9 Earths

Mike Faulkner gave a talk about the making of his 9 Earths film which is being shown in Climate and Environmental events around the world including the recent COP27.

※ Tamara Tyrer: films

Tamara is a film maker and artist and she spoke about her recent phd discussing film and feminism before showing a screening of two of her choreographed films.

SneakAheads: activism and the shoe industry

Professor aladin aladin, Darva Badiei and Sven Segal

* Oliver Wallace: Future Archaeology

Oliver lead an hour of mythological story telling, performance, future dreaming, meditating on possible pathways and writing to encourage imagination in the audience. This was commissioned and designed for The Great Imagining.

THE GREAT IMAGINING Newspaper

We're tying together the exhibition, and the 2022 year, by publishing a newspaper featuring lots of the amazing things that happened over the weekend.

The newspaper contains informative articles, artworks, imaginings and case studies addressing the topics that build The Great Imagining. Reflecting the exhibition, it is written by young people, journalists, artists, local students and by The Great Imagining core team, with each contributor given equal weight.

As well as a recreational newspaper, it's an educational resource which will be distributed around schools to inspire Futures Thinking and participation in The Great Imagining.

Through a Crowdfunder for the printing costs, the newspaper will be available both paid-for and to those who cannot pay.

FUTURES LEARNING: to use the bewspaper to raise awareness, inspiration and finances.

BY MICHAEL CROTON

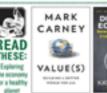

I'm a management consultant, which is fancy words for saying I help people in businesses get their ideas across and bring people with them. Most of my clients are leaders in very big companies, which means it matters a lot that their teams understand and believe in the work they and their company are doing.

I asked a client, who works for a bank in the US, if he thought that banks could help bring about a greener, fairer and wiser world. This is what he said:

"Absolutely we can. We're a community bank and the whole reaso

"At the same time, we absolutely need to do more. We need to we can have more impact across more cummunities

can take our consciousness to a different place and help us set path towards greener, fairer and wiser world that's grounded i the here and now."

ultural production", bringing their production process and turning hope

GLOSSARY

Workshops

Vivienne Havell: Corndollies

The Corn Dolly workshop was led by Vivienne Havell and continued to develop the theme of heritage and folk crafts that ran through the exhibition. The workshop took place over Sunday afternoon and evening and engaged people of all age groups. Young people found it refreshing to work with their hands on an ancient craft whilst thinking about their relationship to the land, food production and our climate and whether systems — as well as the cultural presence of religion and superstition.

Vivienne is meeting with some of the young people this year to continue their conversation and craft.

Prof aladin aladin and Darya Badiei from Sneakaheads with special guests Sven Segal and Gavin Turk

SneakAheads, a youth-led organisation addressing the climate footprint of the sneaker industry launched their campaign at the exhibition. This was a multi-day launch which featured an interactive information stand, a discussion and debate, and a live transformation of a pair of sneakers into newspaper-covered artwork by artist Gavin Turk. The transformation drew attention to the possibility of repurposing sneakers and the fact that 100% of sneakers available are unsustainable, as well as the significance of newspaper and the written political word in art. Sven Segal is a shoe designer and founder of Better Shoes Foundation. Sven designed the footwear for Star Wars and other films and used the budget to develop new innovative materials for the shoe industry.

Cyanotypes

This photographic process involving direct contact of object to paper prepared with a light sensitive coating. This workshop encouraged empathy with nature through thinking about science, physics and the seed pods and plants from the Amazon.

Seed R&D Seed R&D

This workshop encouraged empathy with nature through learning about seed distribution while modelling invented seed pods

*** Josh Knowles and Megascope**

Professional scriber and illustrator Josh Knowles lead a drawing workshop around the ideas in the exhibition.

David Gingell: pasta workshop

Edd Lees from Wildfarmed joined David Gingell & Jeremie Cometto-Lingenheim to close The Great Imagining exhibition with a discussion about food and farming followed by an interactive cooking workshop focused on fresh pasta. Edd talked

us through the history of Wildfarmed which was set up by three partners: himself, George Lamb (the TV presenter turned educationalist) and Andy Cato (from Groove Armada), before taking us on a fascinating tour around regenerative land use, soil health and biodiverse farming methods. There was a brilliant set of questions from the audience, some of whom have experience of running their own farms and navigating complex legislation and technical constraints. One of the most interesting discussion points was around purpose-driven businesses being a liberation from conventional paradigms.

The team at Jolene Bakery supplied bread for the entire The Great Imagining exhibition and it was eaten to accomany delicious stews from Gaia Pulses. We then enjoyed the flour itself through a workshop with Jolene founder and head chef David Gingell who made tagliatelle and ravioli using 00 Wildfarmed flour and fresh eggs with bright orange-red yolks.

* Lisa Dunne: yoga and meditation

On sunday morning Lisa lead a yoga and meditation workshop to focus the audience on mind body and spirit and wellbeing through breathwork and movement.

* Tech Hackathon

Young coder Curtis Turk lead a workshop looking at modern tech apps and their relevance to the contemporary crisis and what contributions they could make. The group looked at different applications and how they can solve some of our contemporary issues and then came up with some ideas for future apps.

* Tom Wilkinson and Arthur Schiller

Kinetic designer Tom Wilkinson and 9-year-old inventor Arthur Schiller led an workshop exploring the future of renewable energies. During the workshop they used everyday items to build electric models which they used to explore the possibilities and limitations of renewable energies. The pair were introduced in preparation for the exhibition and continue to speak about physics, perpetual motion and new inventions and will be running another Future Energies Explorers workshop at another iteration.

* Deborah Curtis: Orienteering futures literacy

The compass points activity was engaging, inclusive, brain-activating

We suggest that anyone curating an exhibition does this once a day with their participants

(But not with stickers: these were hard to remove from the floor)

FUTURE LEARNING: Regular sessions to facilitate exchange of ideas, contacts and thinkings between regional hubs.

Tom and Arthur's workshop came about by chance but was an excellent demonstration of cross generational learning and invention.

Royal School of Needlework

First-year Embroidery students at the Royal School of Needlework responded to our provocation of a Greener Fairer Wiser future by embroidering baseball caps depicting their hometowns accompanied by embroidered patches depicting their wishes for the futures of their hometowns.

The students were delighted to have their work displayed in an exhibition and the task helped the first-years to connect with their new peers. One guest had a cap commissioned after one of the caps really impressed him and this helped develop the self-confidence of the student.

We now have warm connections at RSN and will develop more projects with them for future exhibitions.

Design is about so much more than whether a product looks 'cool'. Design is the way we create products, systems and services, and circular design thinking includes significant decisions about how a product is manufactured, how it is used and what happens when it's no longer needed.

Design isn't about to rescue us from the climate emergency, but the use of sustainable, reusable or recyclable materials, and designing in a circular way (in which waste and pollution are designed out of the lifecycle of the product or system) could significantly reduce its impact and lead us along the path to zero waste.

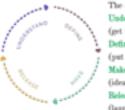

Experimentation and failure are built into the circular design to plastic is widespread process, as any innovative concept requires new prototypes to test consumer technology products. Will they be? You can guess the the effectiveness of each iteration (or version) of the product. 'We answer. It's down to consumers not to buy monstrous hybrids. relish imperfections,' is how one designer put it, because these highlight that new solutions must be found long before going into

Nonetheless, in reality not all new products are made with circular design principles guiding the process. If companies are primarily concerned about costs and what the end-user wants then sustainability can easily be forgotten. This is evident in the sheer number of products which are described as 'monstrous hybrids' (a concept introduced by Braungart and McDonough in their groundbreaking book, 'Cradle to Cradle'), because they are made from — is NOT the same as the circular economy model. a combination of technical and organic materials - for example PVC and paper - that are fused or glued together, which consequently

The circular design process -Understand ≥ (get to know user and system)

Pioneers of speculative design and design fiction, Superflux imagine and build visceral, experiential future worlds.

orking with business, their work develops strategic insight long term decision-making through imagination-led futures. seme but an actual rigorous and quite exhausting practice that nd being able to see connections and between these essibilities; and not retreating from the ache."

Food

We set out to provide healthy, educational, vegan food experiences at little or no cost to the audience throughout the weekend

* Sam Clarke of Moro/Morito

On Saturday Sam Clark and Jane ran an informal educational food workshop outside in the yard.

He prepared stews and flatbreads and taught the audience about composting, soil, supply chains and even how to eat

※ Jolene Bakery + Wildfarmed

On Tuesday Jeremie Cometo Linguinheim, Edd Lees and David Gingell produced a talk and a workshop around supply chains, regenerative agriculture and farming. David Gingell taught the audience how to make fresh pasta from the Wildfarmed flower. Everyone got to taste the delicious produce.

※ Zest Kitchen

This young business run by Saskia and her team provided the food for the opening. This vegan food inspired by Vietnamese cooking was perfect for this busy event.

₩ Gaia Pulses

Yolanda Antonopoulou and Erik Perero and the team from Gaia Pulses prepared over 120 meals for the course of the weekend. We served these in bamboo leaf bowls and wooden spoons with fresh bread picked up each day from Jolene Bakery.

The stews were based on beans and pulses from traditional greek vegan recipes with an education and healthy ethos.

IN FUTURE: Sponsorship by talented chefs, compatible future facing food trucks and vegan caterers are brilliant way to engage audiences in high quality food experiences.

Soundscape

This was put together by Zivi Sainsbury and was four tracks, each of which was played in different sessions giving an ambient sound to the event

a dedicated sound engineer and curator would ensure the playlists and sound levels complement the workshops and talks programmes

Candlelit Matinee

Under 24s takeover

AIM: to attract a specific agegroup of young people to the exhibition.

OUTCOME: Led by young artist Amy James over 30 young people aged 18-24 gathered at The Great Imagining exhibition for a Candlelit Matinée of spoken word, poetry, performances and a screening of Nausica, Valley of the Wind.

Performances from chemistry student Nemo Pederson, artist designer Amy James, and actor Conrad Khan as well as guest appearance from Los Angeles based puppeteers Enormous Face who performed a surreal and challenging puppet show set in the future.

TGI Radicles Teenage takeover

This evening curated by Sofianne Wignall, brought together a teenage group of TGI Radicles - The Great Imagining's teenage wing - to build confidence and have a relaxed evening talking to other young people about the biggest topics of our time - through self-portraiture, music, self-care 'matchbox making' and the practice of relaxing into illustrating and decorating tiles.

Artists

The invitation curated by Alice Herrick reached out to artists. designers and makers to loan something to the exhibition which rose to the brief.

The invitation was to 'offer something to the future which demonstrates how we were great dreamers'

Marketing

* Mailchimp

We mailed out to 5,000 people on our mailchimp email database. We also individually emailed them with invitations to come to the exhibition.

※ Flyers

We created 200 flyers which were distributed by some local community workers in Newham.

OUTCOMES AND FUTURE LEARNING:

Strategy and lead time for flyers and local partnerships.

Audience mailing list

Names/contact details were collected at the desk by work experience team/volunteers,

Most people who came were involved in the exhibition, or were friends or friends of friends.

A diverse/wide range of people/backgrounds/opinions.

OUTCOMES AND FUTURE LEARNING:

Creative ways of gathering feedback and data

Rraining for welcome desk and volunteers

Partnering with institutions

Social media strategy

Bookable workshops online.

More advance planning

Reframing the experience as a 'festival' instead of 'exhibition' Corporate and community invitations.

Social Media/Press

The social media was active and successful: lots of visitors posted about the exhibition

OUTCOMES AND FUTURE LEARNING:

Longer leadtimes

Press releases and PR and marketing strategy

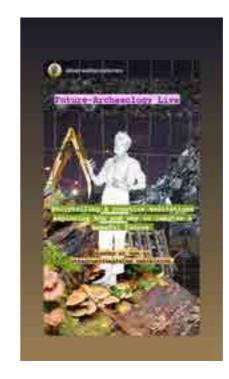

Dedicated photographer/media team

Post-event strategy

Formalise hashtags/social media and track community engagement

Cinema & Soundscape

The cinema programme

Each day we had a different programme of eductional films from different topic areas.

On Sunday Night the Candlelit Matinee under 24s takeover showed a Studio Ghibli environmental allegory Nausicaä of the Valley of the Wind

All these films were accessible also by QR code on the posters outside the cinema.

FUTURE LEARNING: the film programme could be projected on to the walls and in dedicated screens with headphones as well as in the cinema it is a way of layering the concepts, topic areas and opening peoples experiences to new ideas.

RECLAIMING JOURNALISM FOR PEOPLE AND

BY STEPHEN COLGRAVE

Journalism is essential to investigate and reveal Byline finds that most politicians are far behind the people they what is really going on in the world. This has never been more important than today when our planet is under threat.

Too many newspapers and social media networks are owned by billionaires. All they care about is their own agendas not the planet or the people who live in it.

Brline has created a different type of media which is paid for by its readers and viewers by subscription.

INDEPENDENCE

We value our independence. Other papers follow each other, w don't. We spend our time looking for stories and representing people that the others don't. We are not afraid to investigate people or organisations we think are destroying the planet. Only by revealing the truth about the need to save the planet and the best ways to do it, can real change happen.

represent in acting on climate change. At Byline, we are determined to hold them and their governments to account and encourage our journalists to be fearless in making sure this happens.

We look forward to a future where all media is independent and

own newspapers or social media. sites will be properly verified and fact checked so everyone can trust it and the brightest people Importantly everyone will know anyone who is destroying it will be revealed by the media and

The Earth is in crisis, and humanity faces the combined catastrophes of global heating, mass extinction of vital biodiversity,

and ecosystem health degradation. But it doesn't have to be like this,

Why do arts and Culture have such power to generate change?

Culture is the system of values, beliefs, stories, customs and capabilities that hind our relationships with each other, other species and the Earth. Culture is created and recreated in our psyches and imaginations. Artists are emancipators of our imaginations. They can facilitate new ways of seeing, expose ideologies, stimulate creativity, imagine better futput and liberate for change. Once we see we can restory our story, we can intermed and READ groener, fairer, wiser futures.

In the UK, cultural practices and spaces cag offer opportunities to prefigure patterns of belonging, kindness and steward-kilp. Arts and cultural practice can energise people's capacities for action to respond collectively to challenges. Alternation to the story of 'limitless' growth and 'logsumerits can be

imagined. We can learn and honour other cultures, acknowledge the power and privilege of our ewa, explore non-competitive 2005-00 ways of working, open up space to rebearse realities of living to the contract of the contract within coological limits, shape better ways of being human: in our relationships with each other, non-humans, resources for survival, and

Being bold, active players in this great (re)imagining is why and how Culture matters.

knowing ourselves as part of nature.

Step into the Amazon

AIMS: We commissioned Adriana Meirelles to create an immersive experience which connected the Kambebas Community in the Amazon to the visitors to the space.

OUTCOMES: Her installation was in a dedicated space and was activated by touching and feeling plants and seeds from the amazon. Films of the children playing, working and sharing stories in the village and the forest. An illustrated interactive made from cardboard and recycled materials. This told the story of how our consumption here in the UK generates the carbon dioxide that affects the weather in the Amazon as well as illegal deforestation. All of which affect the children and their community in the rainforest.

It worked really well to have Adriana there talking and engaging with people who came into the space.

This area was accessible to quite young audiences as well as older

FUTURE LEARNING: Commissioned installations with the creatives and experts talking and engaging with the audience is going to be a powerful way of stimulating ideas and imagination.

An innovative, educational project to explore the Amazon

The Amazon rainforest is under threat

Its destruction is having an impact both locally and globally. This exhibition has evolved from a project, which was initially funded by the Geographical Association (GA)'s Initiatives Fund, and is the

relmination of input from Adriana Meirelles, a Brazilian animation firector, Emma Espley, an experienced teacher and reelance consultant and Marcella Haddad, a Brazilian photo journalist,

"A strong connection with the Kambeba indigenous community in the heart of the Amazon has been formed during the process and we are continuing to work collaboratively to build bridges between the UK and Brazil. This exhibition reinforces key messages from our project. Through our work, we hope to inspire people to lead more sustainable lifestyles and become part of the solution to a pressing global issue,"

love, friendship, fear, hope, tragedy, redemption, very hungry caterpillars into stories that help us to understand the world better, dropping us into situations from which we emerge moved, enlightened and hopefully entertained. Whatever the outcome, they get us thinking.

Refugee stories have been part of the literary some for almost 3,000 years, Take Th Odyssey, in which Homer charts Odysseus's decade-long journey home to Bhaca after the fall of Troy. Towards the end Odysseus is shipscrocked - long story, rubbed Poseidon up the wrong way, Poseidon sent a massive storm - and he washes up on the island of the Phaeucians, He's lost everything, even his clothes. Before long the princess Nausicaa

arrives at the beach with her maids where they wash some clothes and mess about for a bit. dysseus, bolding some carefully arranged leaves to preserve his dignity, approaches them for help. Now, to these women the man walking across the sand towards them is not the King of Bhaca with a heroic tale to tell, he's a stranger, a foreigner, a man who has come from the soa, dirty and unkempt. For them he has no context, story, he doesn't even have clothes. What ses Nausicaa do? She gives him clothes, feeds him and gives him shelter. Befugee stories like this speckle the entire history of literature,

from Odysseus to Publington Bear via Arthur Dent and even Superman, tales in which the forcibly displaced seek first shelter and then a place in the universe, either returning home or making a life somewhere new. In recent years there have been some excellent novels charting the experience of those forced into itinerance by circumstance. I think you might enjoy them, or at least get something out of them, something to put a bit of life into all those reports and briefings anyway.

Taken from an open letter to the home overview in The New European at CHARLIE CONNELLY

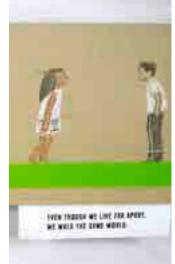

Green Influencers: Handsworth schools

The Green Influencer Scheme is an Ernest Cook Trust initiative to realise young people's potential as influencers within their communities. Green Mentors are trained by the trust and work with young people to engage them with the nature around them in the interests of local ecosystems, their communities and the mental health benefits of being in green spaces; so far, 40 Green Mentors have been trained across 37 host organisations.

Stephen Whitehead, a Green Mentor in Birmingham, teamed up with The Great Imagining and host organisation the Handsworth Association of Schools to run the Carbon Literacy Project across five schools in Birmingham. His aim was to create a community of Green Influencers within schools so that even once the Carbon Literacy Project was completed, the project and its benefits to the ecosystems and communities would continue. Stephen said: 'If I do my job properly, the young people become Green Influencers'.

The process of the Carbon Literacy Project across Birmingham was similar for each of the five schools but with diverse outcomes, as students created the framework to play in themselves. It's empowering because they're discovering things for themselves by going through the creative process instead of being told things. The steps Stephen took were:

- · To create empathy between students and nature
- · To facilitate students to work creatively with the information they were provided with
- To empower students to take meaningful action
- · To build community and begin a movement so that influencers aren't worn out

'Empathy for nature is the first step in taking climate action: pure awareness has never been enough', says Stephen. He believes that most people think that other people don't care as much as they do about the environment, so people don't act because they believe others won't follow. Therefore, his projects are based around personal change which in students' cases often falls into either food and diet or local ecosystems: 'We need to be actively reducing our own carbon footprint. Once people have empathy and care, they start changing their lives'.

The Outcomes of the Carbon Literacy Project in Birmingham were shown in The Great Imagining exhibition in Canning Town during November 2022 and more widely impacted approximately 2000 school students in Birmingham. Asked about the effects of showing them in an exhibition, Stephen said: 'I think it's the fact that we have certain ways of observing and interacting with things depending on how they're capitalised and putting them in an art exhibition really slows people down and gives them time to think about it in a context where they feel comfortable and don't need to understand art history; we help people through the thinking process - it's together, not confrontational'. And certainly, conversations especially about meat consumption - were sparked...

St James and St Clare's Schools

St James and St Clare's schools focused on personal changes that they could make to reduce their own carbon footprint. Asking questions such as 'How long is my hot shower?' and 'How am I making my hot drinks?', they used the artistic practice of photomontage to show how small actions combine to create a 'normal' and how these together build a reality. When we Explore our world through cutting up and reusing images of our everyday world, we may see things differently: photomontage can make the familiar unfamiliar and can create uncomfortable associations between the consumption and the effects of that consumption on the whole planet.

Following this Carbon Literacy Project, St James and St Clare's schools focused their attentions to food. The Influencers have negotiated with their school caterers to go meat-free on Mondays and to stop serving the most carbon-emitting meats, beef and lamb, altogether. The students have declared that they want to 'eat their way around the world' and are speaking to their catering company about ways that they can experiment and make low-carbon foods more exciting.

Oasis Academy Foundry

Oasis Academy Foundry is in Winson Green, Birmingham where there is little green space so the garden needs to be used in really savvy ways. Water pipes run through the hot composting system so that warm water can be circulated underneath the raised beds, increasing the soil temperature and thereby extending the growing season; there is also a food pantry stocked with vegetables grown onsite among other groceries as an alternative to a food bank.

Despite this innovative backdrop, Oasis Academy Foundry students were worried that there was little biodiversity on their small plot of land: they were aware that hedgehogs and birds lived there but were conscious that the land was not rich in wildlife.

With their Green Mentor, Influencers explored land use and biodiversity and modelled this to inspire the changes that they wanted to make including creating a designated area for rewilding. The students built bird boxes and bat boxes and are planning to grow extra flora to attract insect species, creating a liveable habitat for wildlife. Because of the nearby canals which act as wildlife corridors, these areas have the potential to be rich in biodiversity and the correct land use means that animals will soon arrive. 'Even in quite small spaces you can really improve the area and its biodiversity', says Stephen, the leader of the project. Stephen hopes that he has inspired the young people sufficiently that they feel they can continue with their work with the support of the school and that the project is selfregulating and self-sustainable with just small interventions from time to time.

Handsworth Wood School for Girls

Having discovered during the Carbon Literacy Project that approximately half our carbon footprint relates to the food and products that we buy, students at Handsworth Wood School worked on how they can influence others to think about this, especially in the context of food. The important part in choosing this focus area is that it's not someone else doing something else: it's our own choices.

The Influencers are doing a pop-up Carbon Literacy workshop at school on the last day of term where fellow students can learn to design a healthy low-carbon meal and then go to the canteen and choose their lunch with this in mind. The Influencers are also selling crafted and upcycled clothes to spark conversation about not always buying products brand-new. In addition to this, the Green Influencers are demanding a meat-free monday from their canteen management and have calculated that this change at school will save the equivalent of 3,425 tennis courts of green space over one year (calculate your meat-free Monday savings by scanning the QR code!).

It emerged from discussions that there is lots of waste at the school because students are not excited by the food choices, meaning that they don't finish their food. Having researched and debated food options and knowing that food is deeply culturally rooted, the Influencers are giving fellow students samples of things that they never thought they might like. In Stephen's words 'you need to be able to design a cultural shift instead of a food revolution - people need to know that they already like the

For The Great Imagining exhibition, participants designed an immersive space where you can sit down, read and then leave the 'house' and pick up sustainable products such as a repurposed poncho, trainers and bag, normalising and decreasing hesitance around carbon-friendly choices: 'People need to picture themselves in a more sustainable future', says Stephen.

One of the Handsworth Wood Green Influencers is currently designing a Carbon Literacy card game which will be played at the next exhibition... Watch this space!

Hamilton Special Educational Needs School

This is a very urban school with limited green space which the school hopes to extend. Stephen and the students went outside into the green space to develop an understanding of students' relationship with nature and especially with trees. Supposedly, it's more difficult for people on the autistic spectrum to express empathy - but this was relatively disproven. Following their sensory explorations and noticing the joy that the feel of the trees brought to them, the Green Influencers made banners of trees with hundreds of little leaves which rustle in the wind. This was an expression of their feelings towards the trees and local environment.

Having appreciated the benefits of sharing empathy with the surrounding natural environment, the Influencers' goal now is to go outside more often and to spend more time with local trees, both grown and not yet grown. The Influencers' long-term goal is to plant more of the area's native hawthorn and blackthorn hedgerows as well as wild trees including horse chestnut, rowan, oak, lime and chestnut.

Future learning this was a very resolved schools partnership project and is a great model for working with creative partners and networks who work in schools with different agegroups and participate in The Great Imagining exhibitions.

www.caroline-bickman.com

Eco-anxiety sounds or guilt. All these feelings uncomfortable, But I anxiety. I suggest that about it or trying to get rid of it, instead, we should feel proud

You are only feeling eco for, and creating a better anxiety because you care future for us all. If we see futures, animals, nature, this then it can become eco measure mental health by empathy, eco compassion to materialise _ looking at how we respond and eco justice. to external things, and so So. don't be scared of to care about the planet it, feel proud that you and the efforts being made care. for a greener and fairer world is mentally healthy,

I also think that everyone who cares about the planet will be feeling eco anxiety now, sometimes

and wise.

There is nothing more powerful than the unconditional love we hold inside for our children, for our immediate roundings and the places we feel most comfortable and safe, for our fond memories of happiness and joy worrying and feels are a healthy part of eco we've experienced throughout our life.

> nder the umbrella of love all our intentions and motivations mes from the right place. Guided by love we can never to wrong. We will fiercely protect our closest, we'll look fter ourselves, we'll keep our surroundings clean and green because so dearly we want all of that for our kids, randkids and great grandkids to inherit ... calm hearts and minds in clean surroundings.

When this kind of love is felt in the middle of your chest, our intention is pure and realistic and doable, achievable. And what comes after that is that flow Steven Kotler and others are talking about ... doors are opening, real people are crossing you path, your soul tribe is appearing in front and climate justice. We care, eco community, eco of your eyes and there's nothing which seems impossible

Because Only Love is Real

sen Culture project is bridging UK and the Balkans, particularly Montenegre and Macedonia, Let's come together to garage reate our collective greener, fairer, wiser future

Production

Management

*** Creative Content**

Faye Hahlo & Deborah Curtis were supported by Adrienne Merryll & Elizabeth Forrester.

* Production

Gavin Turk worked with Angelo Carnielo, Paul Sakoilsky, Jim Hollingworth, Tom Crawford from the studio.

The install took place over 3 days.

FUTURE LEARNING:

A clearer floor plan

An extra set-up day

A detailed project plan with advance planning

More funding for a bigger team with clear roles/responsibilities.

Sound and Light

* Soundscape

We initially were going to bring in professional Sound and Light team but there was a miscommunication on the dates so in the end this was handled in house.

FUTURE LEARNING: The soundscape worked well on a smaller sound system. We need a dedicated engineer through the weekend to change soundtracks and volume to complement the talks and workshops.

☆ Cinema

This set up in a small annex room worked well after the loan of a larger projector

FUTURE LEARNING: Next time a dedicated Cinematographer would improve the quality of this experience with a bigger screen. The cinema could have been promoted better.

Catering

₹ Zest Kitchen

We had a catering van for Friday Night opening who provided 60 free portions and then afterwards they charged. This was effortless, efficient and delicous.

FUTURE LEARNING: would be good to offer subsidised food that is paid for by the audience to reduce this cost.

ℜ Gaia Pulses

Delicious stews were delivered by Gaia Pulses in large tupperware containers that fitted into our fridges. The excess was frozen.

FUTURE LEARNING: a dedicated chest freezer would ensure this kind of food would be freshly made with no waste.

₩ Bar

On Friday and Sunday night we had a paybar run by volunteers. **FUTURE LEARNING**: this would be good to be a professionally run income generator with more soft drinks offered.

Installation

¾ Artworks

This worked well with Alice Herrick curating the art and supervising the hang. She is an experienced curator and the work looked great.

The ribbons denoting Climate, Water and Soil created a cohesive feel to the gallery of artworks.

FUTURE LEARNING:

More time and planning

Dedicated team with clearer roles

Sound and light engineer
